# Job Architecture & Job Catalogue Transformation

Control the chaos and get your house in order

# Your job data has a significant impact on many strategic business and people initiatives.

It is critical to ensure that data is as accurate and up-to-date as possible. Whether you choose to tackle this internally or to outsource, the typical manual processes involved are time consuming, expensive and open to error.

#### Using RoleMapper's proprietary AI, we will:

- Digitise and harmonise your job titles and job descriptions (from all your sources, whatever the format!)
- Standardise job description documents into customised templates
- Create future-focused, modernised job architecture and job description content
- De-bias and optimise your job descriptions for quality and inclusivity

#### What you get

- An orderly house! Simplified, centralised, job architecture and job catalogue
- A structured, organised, centralised baseline for the future
- De-biased job description documents, optimised for inclusivity
- More effective pay transparency through improved visibility and standardisation (of jobs)

RoleMapper AI rapidly reduces the time and cost required to consolidate and update your job architecture framework and job catalogue. Give us your job data as it is. Let us do the rest.

# How RoleMapper AI works

## Digitise & Consolidate...

- Job titles into a robust job architecture framework
- Job profile and/or description content into standardised template
- Report on baseline quality and inclusivity
